### **~ Watering Guidelines and Aftercare ~**

Clearview Nursery Ltd. has planted a tree/trees at your property and we hope you will enjoy them in good health for many years to come. To give transplants a great start and to promote longevity we ask that you water the trees to our warranty policy specifications.

During the growing season, when there is no significant rainfall, please water each tree twice weekly, or more in severe drought conditions. To do this place a hose on slow trickle directly on the root ball of the tree for about an hour. If you are unable to use a hose, bucketing water to the hole is better than nothing at all. In extreme drought conditions you can increase the length of time and number of times you water each week. Doing this will protect your warranty as we do not replace trees when there is evidence that they have died due to lack of watering by the caretaker. We cannot stress enough the importance of supplemental watering especially for the first year. Please note that a lawn sprinkler system does not provide enough penetration of moisture to reach a trees root system.

Keep mulch away from trunk to avoid extra moisture at the base of the trunk. If your tree has been staked, remove stakes 1 year from date of planting.

If you have any questions or concerns please feel free to contact us at **705-428-0063**.

**~ The best time to plant a tree was 20 years ago. The second best time is now. ~**
